Experienced Software Engineer with a history of creating technical systems and scaling engineering talent. Proven success in shipping production-grade code at scale, mentoring interns through senior staff, and driving productivity through automation and targeted process improvements.

Professional Work Experience

Lead Software/Solution Engineer, Paychex (via Solu Technology Partners) September 2024 – Present
Leading an Agile team of SWEs and SDETs to deliver functionality for a large payroll processing system.

- Led team with cross-functional partners to create REST interfaces to legacy payroll system, leading to 45% of emailed payrolls being processed by an AI service agent.
- Delivered features in a compressed schedule to support recapturing \$700k in payments yearly to terminated workers.
- Improved team productivity during rapid organizational and Agile SDLC changes by mentoring permanent, intern, and offshore teammates and encouraging a positive, proactive ownership mindset.

Tech stack: Python / Java / GitHub Copilot+Claude / Oracle SQL / Splunk

Staff Software Engineer (SRE), Netskope August 2023 – September 2024
Led team of Site Reliability Engineers to support Netskope's data-loss prevention product.

- Implemented improvements in on-call and change management procedures to improve productivity and stability.
- Automated data center cost analysis using Python and Jenkins, resulting in a 97% reduction in analysis time and \$35k in first-month savings.
- Led the migration of private cloud and FedRAMP Kubernetes deployments to Spinnaker CI/CD.

Tech stack: Python / Kubernetes / Grafana / Prometheus / Spinnaker / Jenkins

Production Engineer, Meta August 2021 – July 2023
Engineered global-scale infrastructure for automated server provisioning and optimized dynamic capacity allocation for Facebook and Instagram ad-serving AI models.

- Automated firmware updates for 10,000+ Dell, HP, and Supermicro servers. Saved three days of effort every quarter for each of 25 clusters by eliminating ad-hoc updates.
- Reduced on-call load from 20 to four hours per week by improving documentation, implementing intake processes, and automating error detection and troubleshooting.
- Supported and enhanced a platform in Python, Terraform, and Chef that enabled partners to provision bare metal and virtual servers, increasing self-service tasks by 20-25%.
- Centralized configuration management for ML/AI models in the ad delivery stack, allowing AI Engineers to focus on model tuning while mitigating outage risks.

Tech stack: Python / Rust / SQL / Terraform / Chef

Lead Software Engineer, Marqeta 2020 – 2021
Technical lead for new white-label credit card product including transaction ledgers and inbound customer-facing APIs.

Tech stack: Java / MySQL / Spring Boot / Docker

Principal Software Engineer, Catalant Technologies 2019 – 2020
Researched and implemented plans to address core performance/stability issues and guided culture in satellite office.

Tech stack: Python / Flask / JavaScript / Bootstrap / MySQL / Docker / Elasticsearch

Senior Middleware Architect, Paychex 2013 – 2019

- Created system to rebalance 24,000 databases on 200 Azure MSSQL servers using ML and statistical techniques.
- Migrated a bespoke inventory system to AppDynamics, saving 4 FTEs by tracking metrics on 20,000 Java JVMs.

Tech stack: Java / JavaScript / Python / Scikit-Learn / SQL / AppDynamics / Machine Learning

Additional Selected Experience

Adjunct Professor, Rochester Institute of Technology
Lecturer for courses in Java, SQL/DBMS, Python/shell scripting, and software industry engineering practices.

Consultant and Subject Matter Expert, Logical Operations
Creator and advisor for Machine Learning, Artificial Intelligence, and Data Science courses.

Education

Master of Science in Computer Science - Georgia Institute of Technology

Bachelor of Science in Computer Science and Engineering - Bucknell University
